

Courier *Enterprise* Secure File Transfer Appliance (SFTA)

Accellion Courier *Enterprise* Secure File Transfer Appliance

Courier *Enterprise* SFTA is an appliance designed for multi-site and high volume business file transfer needs.

In addition to features offered by the *Standard* SFTA, the *Enterprise* SFTA also provides multi-site replication and storage/SAN integration.

Sending files through the SFTA can eliminate nearly 80% of the email load. And, with automated file and account management tools, there are no more FTP server management chores to attend to or lingering concerns over security and process breaches.

Businesses Send Large Files

Gone were the days when network traffic was limited and security concerns few. As the prevalence of large files (>10MB) spread from specialty uses to the everyday business needs of sending large presentations or high resolution graphics and photos, CD burning, E-mail and FTP are no longer sufficient. In addition to becoming a disproportional burden on internal processes, CD burning, E-mail and FTP do not meet the regulatory and legal mandates such as Sarbanes Oxley. Today's enterprises require secure, ad hoc, and instantaneous sharing of information that SFTA offers.

Benefits and Savings

Send any size file/folder securely and easily

Courier *Enterprise* SFTA allows you to securely send files/folders of any size to recipients at any location and organization. Senders receive a download receipt whenever a file is downloaded. By moving file transfer to the dedicated SFTA appliance, user and administrators will also notice improved email server performance and the end of restrictive file attachment quotas.

Reduce cycle time while eliminating FTP servers and CD burning

Solutions such as FTP servers require on-going administrative resources for setting up the server, accounts, and managing security, coupled with end user training and maintenance. End user solutions, such as burning CD's and sending them overnight increase cycle time, lessen collaborative intensity, and drive up costs.

Achieve Sarbanes Oxley and regulatory compliance

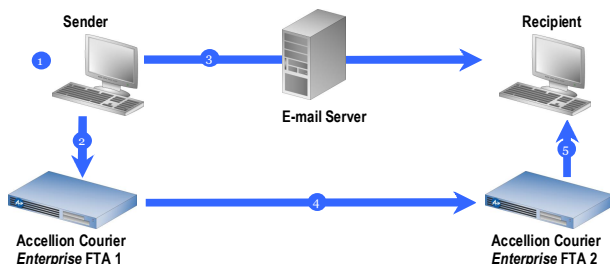

Courier *Enterprise* SFTA offers a key component in implementing the secure and auditable file transfer processes required for meeting IP security needs and compliance mandates such as Sarbanes-Oxley Section 404, 21 CFR Part 11, HIPAA, Department of Defense (DOD) 5015.2, and Securities and Exchange (SEC) Act Rules 17a-3 4 (17 CFR 240,17a-3,4).

Key Features

- Send folders and files up to 20GB in size with one click
- External send back
- Outlook/Notes integration
- Local and remote file replication
- Web-based management console
- Automated download receipt
- File auditing and tracking
- Directory Services integration
- Automated file and account management
- Multi-site support
- Storage/SAN integration

Courier *Enterprise* SFTA Workflow

1. User sends files/folders through web interface
2. Files/folders are uploaded to the closest Accellion Courier *Enterprise* SFTA
3. Link to file/folder is sent as an e-mail
4. Data are replicated between Accellion Courier *Enterprise* SFTAs
5. Recipient clicks on link and downloads the files/folders from the closest Accellion Courier *Enterprise* SFTA

User Features

Users find the web and email interface intuitive to use and the enterprise corporate address book integration fits into the existing workflow.

Web-based UI

Courier *Enterprise* SFTA's interface requires no training if the user is familiar with standard Web operations. Furthermore, the interface can be customized for company specific branding.

Optional email integration

Courier Enterprise SFTA also offers the option to integrate with Exchange/Domino clients for users who do not wish to use the web interface.

Integrate with corporate address book

Users can address a message by selecting from the corporate address book.

Automated download receipt

When a recipient downloads the file, a return receipt is generated to the sender. The recipient is unaware of the return receipt and cannot turn it off.

External send back

External users like partners and customers can self-register with the SFTA appliance in order to send files back to the company without account setup by IT.

End-to-end file security

Files are uploaded, stored, and downloaded through secure links and recipients are authenticated ensuring only the intended recipients can access the file.

File/Folder capability

Users can send folders and files up to 20GB with one click.

Administrative Features

Accellion Courier *Enterprise* SFTA is an easy to install appliance that requires minimum ongoing maintenance.

Easy to install and maintain appliance

The SFTA appliance incorporates the hardware, operating system and software to minimize IT management footprint.

Better infrastructure performance

File transfers bypass the mail server and eliminate network delays

Web-based administration

A Web-based administrative console enables quick set up as well as access to system performance and usage reports.

Directory services authentication

LDAP and Microsoft Active Directory are used for authentication and to minimize setup efforts.

Administrative and system reporting

File-level analysis enables tracking, forecasting, allocation, recovery and management of storage and bandwidth costs.

File transfer auditing and tracking

Auditable records on when recipients download attachments that can be summarized by individual recipient, file name, time and date.

Support clustering for multi-site and replication needs

It is designed for Enterprise deployments with clustering for load balancing, intelligent replication, and failover.

Optional integration with enterprise storage infrastructure

Administrators can set up rules to manage the life cycle of files centrally per corporate retention policies. Multiple copies are identified and removed based on set demand levels or after a period of time and can be moved to long-term storage over time

Key Benefits

- Send any size file/folder securely and easily
- Reduce cycle time while eliminating FTP servers and CD burning
- Achieve Sarbanes Oxley and regulatory compliance

E-mail integration
